

# *Mapping the Future for DECT*

The logo for the DECT Forum is centered over a stylized image of the Earth. The word "DECT" is written in large, bold, black, sans-serif capital letters. Below it, the word "FORUM" is written in white, sans-serif capital letters on a red rectangular background that is slightly tilted. The Earth is shown from a perspective that highlights the continents of Africa and Europe, with a blue sky and white clouds. The background of the entire slide is a dark blue space with white stars and glowing white orbital lines.

## ***Agenda***

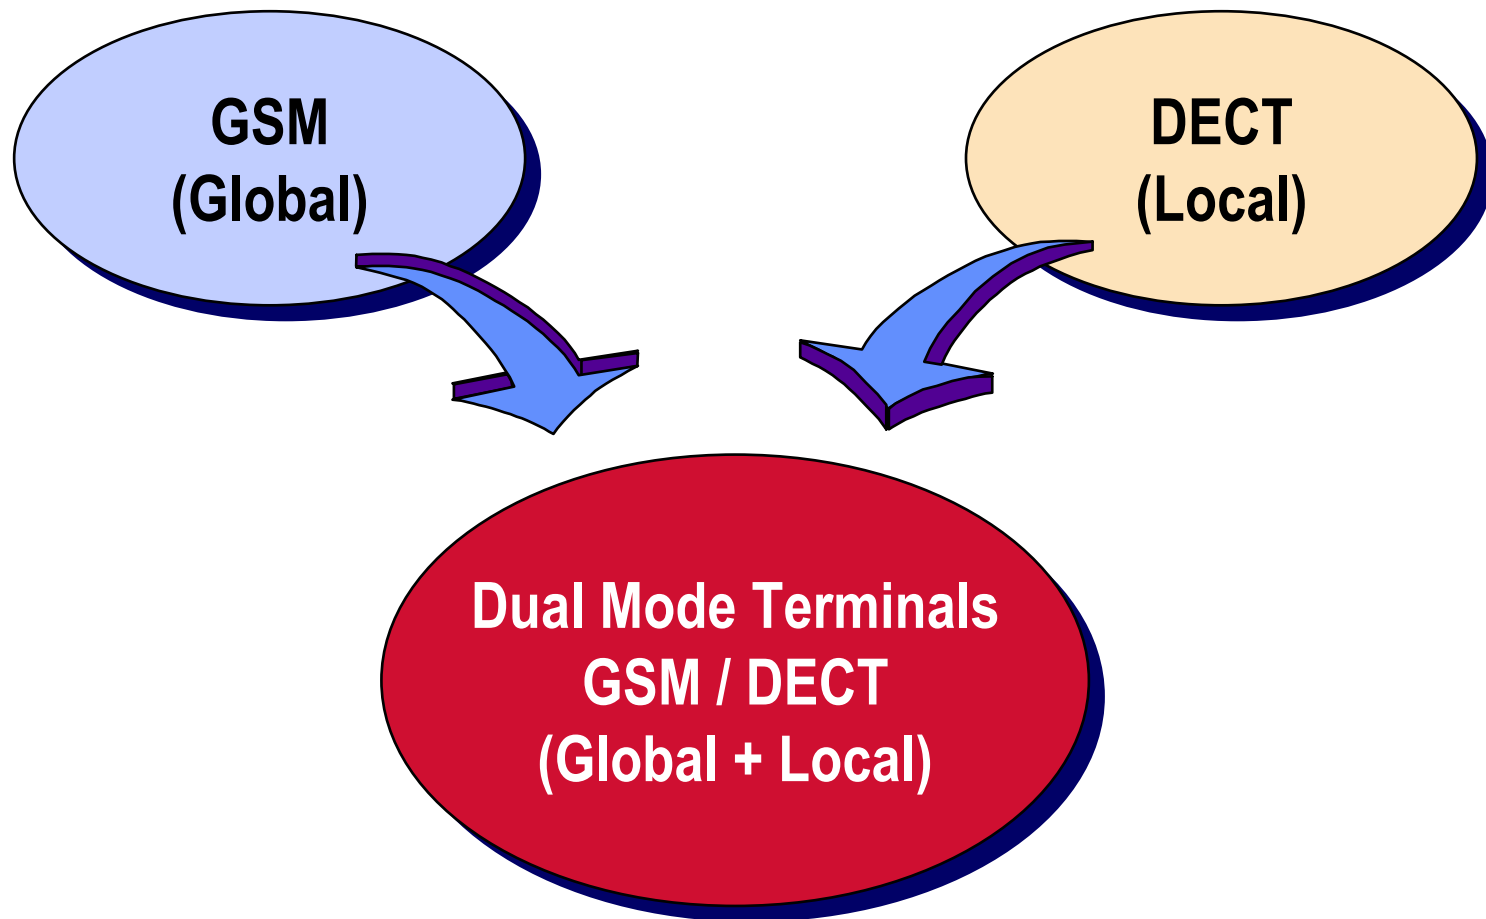

- What did we learn today ?
- A look into the past: What ever happened to DECT/GSM dual-mode ?
- Market forecast reviewed
- What is the driver of the future market ?

## *What did we learn today ?*

- “Baby boom” is over, but DECT sales continue to grow steadily
- Messaging could be the real driver of GSM / DECT integration
- M2M and other industrial applications keep being a growing niche
- Components continue to become more powerful, more integrated and cheaper: DECT is cheaper than bluetooth
- The DECT standards continue to evolve into multi megabyte capability with high-performance FEC
- DECT is strengthening its position as a IMT-2000 family member

## ***DECT/GSM - Dual Mode***

## ***Why did DECT/GSM dual-mode fail ?***

- It did not add any additional value for the user (all you could do was still only phone calls)
  - The prime driver was saving money on tariffs
  - It was not in the interest of one category of market players: the cellcos
- 
- ➡ ***Make sure that the new technology adds real value and responds to a real need. Cost is less of an issue than we believe: the most successful data service in average costs € 0.01 per transmitted bit***
  - ➡ ***Don't set up a new infrastructure to compete purely on "minute rates". A cellco's / telco's cost for an additional minute of service is close to zero***

## *Learn from past experience ...*

... to prevent failures like

- DECT Telepoint
  - DECT / GSM dual-mode
  - WLL (all technologies)
  - PLC
- 
- others may follow

## *The role of market forecasts*

- Market forecasts are always issued to convey a message and not to tell the truth
- How does it work ?
  - Take an arbitrary source of market forecast and modify it slightly (upwards, obviously) and publish it
  - The original source will take it, believe that this is the truth (because it is from a market participant), and modify it slightly (upwards, of course) and republish

## ***DECT shipments (published by DECT Forum 1997)***

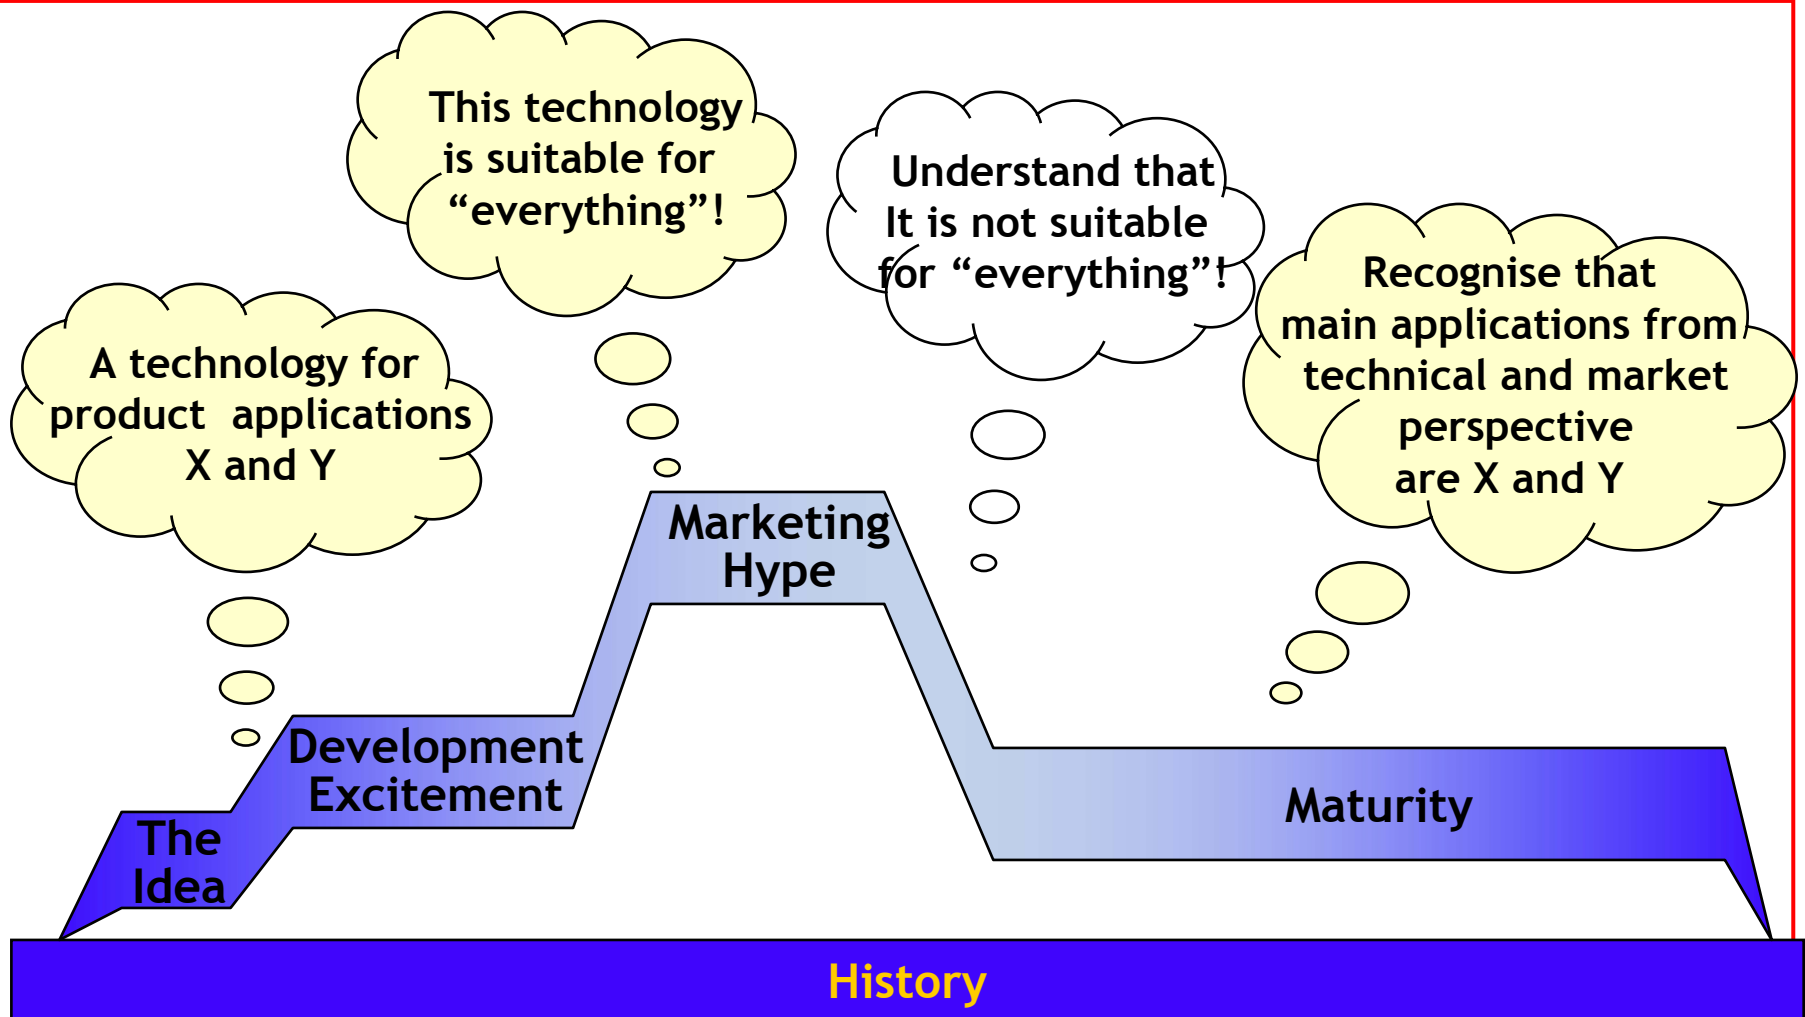

## ***Actual Market Data***

- Earlier published data from the DECT Forum refers to the number of sold radios, i.e. a projected 30 mio radios for the year 2000 was forecast in 1997
- Today, the DECT Forum data refers to sold handsets
- The number of sold handsets
  - was 18.8 mio in 2000
  - was 27.7 mio in 2002
  - will grow between 13 % and 14 % per year

# *Peeling off the “marketing hype” from the technologies and apply a “matured” view*

## *Drivers of the market*

- DECT was - and will be - a voice centric technology, although DECT data was included in the concept from the very beginning
- DECT data will primarily complement the voice functionality of a DECT system
- New developments (UWB, 802.11g, WPAN, ZigBee, NFC, etc) aim at short-range with higher throughput
- DECT will find applications in the professional M2M and telematics area - thanks to Bluetooth
- In the short term, messaging (F-SMS, F-MMS) will be the driver for new DECT telephones (currently the monthly increase of the number of F-SMS per is around 1 million)

***the road to F-SMS or F-MMS is called DECT***

## ***Messaging***

- The DECT Forum aims at promoting DECT based fixed line messaging
- Encourage the whole industry to make SMS / MMS capable terminals
- Encourage fixed line operators world-wide to deploy fixed line messaging
- Promote common protocols
- Cooperate with mobile industry to extend messaging to fixed line

## ***DECT inhibitors***

- Main advantages of DECT today are
  - DECT is an established and still maintained standard and selling in volumes
  - DECT has a good range in a frequency band of its own
  - DECT has an excellent range of features
  - DECT is a IMT-2000 technology
- Whatever threatens these advantages is an inhibitor to the ongoing DECT rollout
- The activities of the DECT Forum aim at keeping these advantages
  - Encourage the industry to continue making DECT
  - Encourage the industry to make products for new promising applications
  - Make users (and industry) aware of the features
  - Defend the unlicensed DECT spectrum world-wide

*See you again next year*

**Ready  
DECT  
GO!**

*Thank you for your attention  
and for coming*
